

Keep Watch All The Time

Make Play Around Water Safe

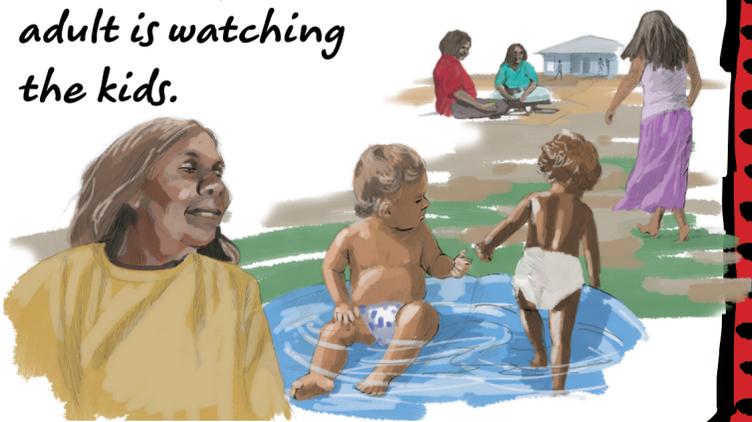

Any type or amount of water can be enough for little kids to drown. Keep an eye out around your home for dangers and get rid of them.

Empty out water from paddle pools, buckets and tubs after using them.

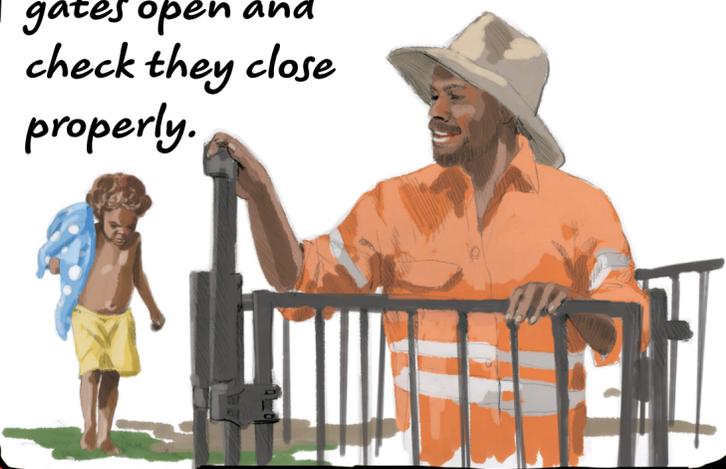

When lots of people are around, make sure you know which adult is watching the kids.

Large portable pools must be fenced to keep them safe

Never prop pool gates open and check they close properly.

Never leave bigger kids to watch the little ones around water. They might not know if something is not safe.
